AppBuilder Value Proposition

• Access to multiple databases

Data is accessed from wherever it resides on the network without requiring the timeconsuming and technically-intensive work of first copying the data to a new location. This allows asset teams to quickly retrieve large amounts of information from various data sources in real time.

Improved Workflow Efficiency

Reduces decision-making cycle time and adds value for technical teams through interactive dashboards, reports and ready access to relevant documents.

Flexibility / Adaptable to Change

Able to quickly change or add new dashboards, reports, and Key Performance Indicators to support rapidly changing business requirements. AppBuilder can be tailored to provide a custom fit to the way any organization does business

Cost-effective implementation

AppBuilder provides standard templates that can be customized or allows users to create their own templates from scratch. These templates can be deployed in days and weeks, rather than months, and require little to no training to use.

• Bridging the data and document divide

Providing business users with a contextual framework which allows them to link enterprise data to enterprise content

Business Intelligence Players

The AppBuilder Advantage:

- Our specialty is "in situ" integration of disparate data stores by providing enterprise access to the data contained in these repositories
- Our unique position as a niche player with a very high ability to execute.

The AppBuilder Niche Market

AppBuilder Report Painter

Report Features

- Uses Crystal Reports a bestof-breed report writer
- Advanced report publishing enables automated generation and distribution of output reports
- Ad-hoc Report Generation
